## **UBIVERTEX - Letter of Intention**

Name: Barcelona Supercomputing Center  Activity domain: Research in Computer Science  Number of employees:	Institute/Company	
Activity domain: Research in Computer Science  Number of employees:		
Number of employees:		
Scientific contact Name: Toni Cortes Mail: toni.cortes@bsc.es Phone: +34 934016950  Challenge descriptions:  The main objective of our group is to develop new storage systems as well as components of already existing storage systems in order to increase the usability, performance, and scalability of such systems.  One of the main problems that we face consists on finding large enough systems where we can test our new approaches and ideas. In this line, UBIVERTEX will be a very convenient testbed for our new developments. It will allow us to access a large system with enough control over it to make storage experiments that cannot be done in currently available infrastructures.  Type of commitment (internship, Phd grant, engineering staff): PhD students, Post docs, and engineering staff  Number of persons involved in these challenges:  Signature of Signature of the Head of department:
